Metis Secure Signs Intertech Security as its First Reseller

PITTSBURGH (December 16, 2009) - Metis Secure Solutions, LLC today announced it has signed a reseller agreement permitting Intertech Security, LLC of Pittsburgh, PA to sell and install its new Metis Secure location-based emergency notification system (ENS). Intertech, one of the fastest growing security systems integrators, will offer the complete Metis Secure hardware/software ENS platform to customers in educational, commercial and other markets.

"Metis Secure is thrilled to have Intertech as a new partner," said Mark Kurtzrock, Metis Secure's President and CEO. "Their expertise as a security systems integrator will significantly help to broaden our sales channel base and help us gain traction in commercial markets where demand for ENS solutions is growing." Kurtzrock explained that the Metis Secure ENS platform can be effectively used to provide emergency information in commercial, industrial, real estate and education markets.

Metis Secure's ENS platform is a new location-based approach to emergency notification that has been initially sold to the higher education market resulting in Carnegie Mellon University, Slippery Rock University and the University of Pittsburgh being its first customers. The Metis Secure system was awarded the 2009 Technology Innovator of the Year honors by Campus Technology Magazine.

This agreement also furthers Intertech's commitment to integrating specialty technologies in the security market by strengthening and enlarging their role as a Value Added Reseller (VAR). Intertech's commitment as a VAR includes offering a broad product selection, competitive pricing, fast delivery, 24/7 emergency operations support, system integration and training.

"The addition of Metis Secure's world-class system to our lineup makes it easier to provide our customers with innovative ENS solutions," said Chris Wetzel, Intertech's Executive Vice President and Founder. "We are committed to offering products to our customers that provide them with the best opportunities to protect their work places and employees and to manage

communications during emergencies. We believe Metis Secure's leading mass notification solution is an exciting and very unique product that closes a critical gap in existing systems. It is a perfect complement to our other security offerings."

InterTECH is currently installing the Metis Secure system at Slippery Rock University.

About Intertech Security

As an independent systems integrator, Intertech works with best-of-class suppliers to provide comprehensive systems, consulting, technical, and monitoring services. Intertech Security designs innovative systems that integrate security devices, electronic technology, and IT systems with operational and enterprise systems – sharing information across disparate networks and components making business operations more productive and efficient. Information about Intertech can be found at www.intertechsecurity.com

About Metis Secure

Metis Secure Solutions has designed an integrated hardware /software platform for emergency notification that delivers detailed instructions to specific locations in seconds. Metis Secure's unique technology can operate independent of phone, WiFi, Ethernet, internet, power, and overcome the challenges of reception dead zones. In bypassing the failures that cripple other systems, Metis Secure is significantly more effective than cell/text and email notification systems. Information about Metis Secure can be found at www.metissecure.com
