

Features

Emergency and security personnel use Metis Secure MS-5100 Emergency Help Stations to broadcast rapid, targeted alerts to a room, floor, building, or entire facility in seconds. People in need can press the button on any Help Station to speak with security patrols, police, or off-site central stations via a hands-free voice connection. The system automatically transmits the location of the trouble spot, so security can immediately deploy help.

The Help Station is designed for use in hallways, laboratories, manufacturing floors, meeting rooms, lecture halls and other spaces where large groups of people gather. The system operates even when power, internet, and cell networks fail. The MS-5100 Emergency Help Station connects to easy-to-use, map-based Command Center software. Using the cloud-based software, security and emergency managers can send instant alerts to their facilities from anywhere, on-site or off. Alerts can broadcast via Help Stations and/or existing site systems such as loudspeakers, digital signage, desktop alerts, IP phones, and third-party email/text services. Help Stations can also be activated by buttons, key switches, or other hardware.

Communication Technologies

- Wired Ethernet (LAN)
- Independent wireless mesh network
- Optional FM-RBDS digital sub-carrier signal

Power

- 12-24V DC, Power over Ethernet
- Long-life, rechargeable battery back-up

Specifications

- **High-impact ABS plastic**
- **LED lights covered by clear plastic lens with prismatic pattern to increase visibility**
- **Case secured with four tamperproof security bolts**
- **High contrast graphic LCD screen**
- **Blue and amber ultra-bright LED lights and illuminated help button**
- **Built-in microphone & Voice-optimized speaker**

In-Building Help Station

**Instantly alert your people in a crisis,
and deploy help where needed**

Features and Benefits

- High-speed alerting—deliver alerts in less than 10 seconds.
- Rapidly broadcast widespread or targeted emergency alerts, using voice and text display, siren and flashing lights.
- Operate with easy to use, map-based Command Center software from anywhere, on site or off.
- Launch alerts from mobile phones or tablets.
- Send different instructions to different locations, e.g., telling people inside a building to lock down, and telling those outside a building to stay out.
- Simultaneously send alerts through existing site devices such as digital signs, loudspeakers, IP phones, and desktop computer screens, as well as third-party email/text services.
- Speak with people in need via a two-way, hands-free, live voice connection.
- Help ensure that you can still use your communications system when phone, power, or data closets fail.
